

SOLORAKE™

This fabulous mane and tail thinner provides a pain free, pulled look. SoloRake is two headed to save time and money and will work on the most sensitive animal. The rubber grip handle and well balanced tool enables the SoloRake to sit comfortably in your hand.

Instructions Mane & Tail

Step 1. Start with a clean tangle free mane or tail using a conventional pulling comb or brush to remove tangles.

Step 2. Simply rake using even vertical strokes, with little pressure. Your SoloRake can also be used under the mane or flip the mane over and rake from the other side.

For sensitive areas such as the forelocks and fetlocks we recommend you use the SoloComb.

The coarse blade (9 teeth) works brilliantly on thick, full tails and manes, or on a horse that hasn't been tidied before. It manages a large amount of hair easily and efficiently leaving a tidy finish in minutes.

The thinner blades (17 teeth) are perfect for the average type of mane and tail. It's rather brilliant to finish thick manes and tails after other blades have shaped them.

The SoloRake also works perfectly on pets' coats. Simply rake through the pet's coat and stop when the coat is thinned to your liking.

Cleaning:

Remove dirt and hair from the gaps between the blades with a brush (an old toothbrush is ideal). Use a damp cloth to clean the handle of your SoloRake.

The SoloRake is designed for manes and tails. SoloComb Ltd is not liable for any misuse of this product.
